

## Press Release

San Francisco, October 13<sup>th</sup> 2008

### CCS launches subsidiary in the USA

CCS Cell Culture Service has launched a new US subsidiary in the state of California. Since 8 years, CCS is supporting pharmaceutical companies in their drug screening campaigns. "The expansion into the US market will facilitate a closer collaboration with our American customers and let them benefit from our experience in working with 'Frozen Instant Cells' ", says Dr. Oliver Klotzsche, President of CCS Cell Culture Service, Inc.

As a flexible external cell culture unit CCS supplies starting material for advanced screening and makes screening faster and more efficient.

CCS offers the custom generation of recombinant cell lines expressing the target of interest and develops reliable and significant assays.

For screening, custom membrane preparations and recombinant proteins are provided. Furthermore CCS offers Frozen Cells in vials or in plates for instant use in cell based assays, as a valid alternative to cells from a growing culture.
