CCS announces the opening of their advanced cell culture laboratory in Princeton, New Jersey

CCS Cell Culture Service, an international supplier of custom generated recombinant cell lines, and custom frozen cells and membranes is very pleased to announce the opening of its Princeton, New Jersey laboratory and office space.

This new CCS laboratory, customized for advanced frozen cell and membrane production and processing, has been established to service the growing needs of CCS's expanding US client base. CCS will use these exceptional facilities for the advanced proprietary cell culture protocols and preparations for which CCS has become known. Conveniently located in Princeton NJ, a centre for scientific and academic excellence, the region offers exceptional resources for the company's growth, and facilitates close communications with many of CCS's pharmaceutical and biotechnology clients.

CCS Cell Culture Service provides the custom generation of recombinant cell lines, custom production of frozen Instant cells™, and production of cell membranes and recombinant proteins for cell based drug screening.
